> From the Editor's Desk "Saying it like it is!"

This was the week that'll be remembered for a long time to come around here. As I slowly and deliberately put the keys to the new Pantera in the desk drawer, while at the same time thinking of the " all new beginnings" that are upon me and mine, I can honestly say things will be different from now on.

For the next two weeks, I'll be very busy getting accustomed to all the "ins and outs" of this new ZEOS Pantera Pentium. (Seems that lightning had something "more" in mind for me.) From then on, you can expect a number of in-depth reports on this amazing ZEOS Pentium 90Mhz Pantera.

Beginning with the conversions of an almost infinite number of configuration files to the installation of 2gb's of hard disk, a fully functional SCSI port (Adaptec 1542cf), the AWE32 2mb Super Sound Card with Roland's SCD-15, two CDROM drives one (Teac's CD55a4x) connected to the AWE and the other (Mitsumi's IDE 2x) connected to the Secondary IDE port, a 250mb scsi tape backup, two printers (HP LJ4p & Fargo Primera Pro Color) and finally.. the Canon IX-4015. This is the "dream system" we promised to explore in detail and write about. Well, it seems others liked the idea too. As I am sure you tell by the "lineup".

So.. over the next few weeks I'll be banging my head against the wall delving into this mass of hardware. Hopefully, it'll make some highly informative and equally interesting reading for the some time to come. I fully expect to produce no less than ten separate articles about the "Dream Machine". Stay tuned we're gonna have some fun.

During the entire time we're into the Dream Machine, you can also expect to see some of the very latest in software being installed and put completely through its paces. The results of which will appear right here in STReport.

Don't miss the preliminary reports about Apple & Motorola. Seems Apple may be "sporting" a new logo. Read about it in this issue.

Of Special Note:

STReport will be branching out further to Internet's userbase in the very near future. We've received numerous requests to receive STReport from a wide variety of Internet addresses. As a result, we're putting together an Internet distribution/mailing list for those who wish to receive STReport on a regular basis, and we'll UUENCODE each issue and mail it to you.

If you're interested in being added to our mailing list, please, send your requests to either "dpj@delphi.com" or, RMARIANO@DELPHI.COM. Look for mailings to begin by October first. We are also considering a number of Internet ftp sites in which to post our issues for as well. Whatever we can do to make STReport available to you. we'll try it!

STReport's Staff DEDICATED TO SERVING YOU!

IMPORTANT NOTICE

STReport, with its policy of not accepting any paid advertising, has over the years developed the reputation of "saying it like it really is". When it comes to our editorials, product evaluations, reviews and over-views, we shall always keep our readers interests first and foremost. With the

user in mind, STReport further pledges to maintain the reader confidence that has been developed over the years and to continue "living up to such". All we ask is that our readers make certain the manufacturers, publishers etc., know exactly where the information about their products appeared. In closing, we shall arduously endeavor to meet and further develop the high standards of straight forwardness our readers have come to expect in each and every issue.

Computer Products Update - CPU Report
---------- ----------
Weekly Happenings in the Computer World

Issue #41

Compiled by: Lloyd E. Pulley, Sr.

******* General Computer News *******

** Motorola Unveils PowerStack PCs **

Motorola Inc.’s new PowerStack line of PCs, servers and multi-user systems is based on the PowerPC microprocessor designed with IBM and Apple Computer.

The systems are seen by sources as Motorola’s bid to "jumpstart" the market for the chip, which is intended to compete with industry leader Intel’s Pentium processor.

It’s noted that Motorola’s announcement comes just as IBM also is launching a new line of computers going after the high end of the $10 billion workstation market. Only Apple currently produces a general purpose PC using the PowerPC.

The PowerStack systems work with IBM’s AIX operating system and are based on the 32-bit peripheral component interconnect bus, offering a variety of memory options up to 6 gigabytes. Sources say Motorola will sell its new workstation unit starting at $3,295.

Dataquest researchers predict about 2 million PowerPC chips will be

marketed worldwide this year compared with 4.6 million Pentium chips.

** Motorola Said Eyeing Apple Buyout **

Rumors on Wall Street are that chipmaker Motorola Inc. might make a bid to take over Apple Computer Inc.

Apple and Motorola aren't talking, of course -- "As is our general policy, we do not comment on rumors," Apple spokeswoman Betty Taylor told the Reuter News Service -- and some analysts say they also have heard speculation that AT&T might make such a bid.

Meanwhile, the daily poll that is the stock market seems to have had mixed feelings on the notion. Apple stock closed up 2 1/4 at 36, while Motorola was down 1 3/8, closing at 49 5/8.

Analysts said acquiring Apple would ensure a continued market for the PowerPC chip, which Motorola co-developed with IBM and Apple. Motorola and Apple could leverage their combined technologies to make developments with personal digital assistants.

** Sierra Semi Buys Prometheus **

Sierra Semiconductor has agreed to acquire Prometheus, a software and hardware producer, effective immediately.

"Our strategy is to add valuable functions to our modem/fax platforms to help our PC customers differentiate their products," Sierra Chairman/ CEO James Diller said in a statement, adding Prometheus will continue to operate as a "completely independent company."

According some sources, the buyout agreement calls for Sierra to acquire all the shares of Prometheus for future cash payments, the amount of which is not being disclosed, but which will be determined by future sales and profits of Prometheus operations.

** 3DO Claims 250,000 Units Sold **

One year after its debut, the 3DO Co. reports that 250,000 3DO Interactive Multiplayer video game systems have been sold to consumers worldwide.

The first 3DO Interactive Multiplayer system was introduced by Panasonic in the U.S. in October 1993. Since then, Panasonic has introduced its 3DO system in Japan, Canada, the U.K. and Taiwan. Panasonic plans to introduce 3DO products in more countries in 1995. The Panasonic 3DO system currently retails for $399 in the United States.

Sanyo is scheduled to introduce its 3DO system in Japan this week. Creative Labs plans to launch its 3DO Blaster PC card this fall. GoldStar launched its 3DO system in Korea in September and plans to launch the system in the U.S. in early November.

3DO reports that in North America the 3DO system is now available at 5,000 retail locations. It adds that Electronic Arts' FIFA International Soccer is the 100th title released for the system.

3DO has also launched 3DO Direct, a new toll-free direct order line. The company says 3DO Direct is designed to make purchasing 3DO software, hardware and peripheral products simple and convenient. 3DO merchandise such as T- shirts, hats, coffee mugs, and watches are also available through 3DO Direct.

** Jurassic Park Bundle Ships **

Multimedia software publisher Knowledge Adventure reports that its 3-D Dinosaur Adventure-Jurassic Park Combination Package is available this week.

The package combines the La Crescenta, California-based company's 3-D Dinosaur Adventure software with the a video copy of Jurassic Park.

The Knowledge Adventure says the 3-D Dinosaur Adventure- Jurassic Park Combination Package is available at Babbage's, CompUSA, Computer City, Egghead, Electronic Boutique, Eleck-tek, Fry's Electronics, Future Shop, Incredible Universe, Office Depot, Office Max, Software Etc., Staples and Radio Shack. The package is available in PC and Macintosh versions.

** Artisoft Expands Tech Support **

Artisoft Inc., which produces the LANtastic network operating system as well as network management, backup and multiplatform connectivity systems, says it has extended its priority technical support to Saturdays between 6 a.m. and 5 p.m. MDT.

Effective immediately, Artisoft users and resellers in the U.S. can receive fee-based priority technical assistance on Saturdays by calling 1-900- 555-8324 or the newly implemented 1-800-293-3936. The service costs $2.50 per minute.

"We expanded our technical support to accommodate resellers and end users who work on Saturdays and to more closely match changes in the workplace," says Joel A. Davis, Artisoft vice president of sales and support for the Tucson, Arizona-based company.

Artisoft says the 800 number is designed to serve customers whose business phones are blocked from dialing 900 numbers. Support via the new 800 number is charged to American Express, MasterCard or Visa, while 900 calls are charged to the caller's phone bill.

** AMD Supplies '486s to Digital **

Advanced Micro Devices Inc. says it has entered into an agreement to supply Am486 microprocessors to Digital Equipment Corp. for selected personal computer systems.

Initial shipments of the Am486 devices to Digital have already begun, says AMD. The deal's terms weren't disclosed.

Digital is one of the fastest growing PC vendors in the world -- growing at almost 200 percent in 1993. AMD is the world's second-largest supplier of Windows-compatible microprocessors and has shipped more than 70 million microprocessors since 1982 and more than 28 million in the

past three years.

** WordPerfect Upgrade Ships **

Novell Inc.’s WordPerfect subsidiary is shipping WordPerfect 5.2+ for Windows, an upgrade to WordPerfect 5.2 for Windows.

The new version adds file compatibility with WordPerfect 6.x for DOS and Windows. The product has also been enhanced to run faster on ’386 machines with 4MB of RAM.

"File compatibility with WordPerfect 6.x has been a popular request from our 5.2 users," says Glen Mella, WordPerfect’s vice president of marketing. "More than 80 percent of our European users, for example, work in mixed environments with both ’386 and ’486 machines using both versions of WordPerfect for Windows. WordPerfect 5.2+ for Windows lets users easily exchange files with WordPerfect 6.x users and is the best word processing solution for lower- end machines."

Current WordPerfect 5.2 for Windows customers can receive WordPerfect 5.2+ disks for $24.95 plus shipping and handling. Upgrades from previous versions are available for $69. A competitive upgrade is available for $99.

** Feds Probe Online Legal Services **

A preliminary antitrust investigation into the online legal research-services business has been launched by the U.S. Justice Department, focusing on West Publishing Co., an Eagan, Minnesota, publisher of the Westlaw database.

Staff reporter Timothy L. O’Brien of The Wall Street Journal this week quotes West attorney Gerry Sikorski as saying, "We have been in touch with the Justice Department regarding their inquiry and their investigation into the computer-assisted legal research industry."

However, Sikorski added, "We specifically asked if West was the target and they said no, it is a general inquiry." He said he believes that West was first informed about the investigation by the Justice Department last Wednesday.

Meanwhile, O’Brien says Mead Corp., the Dayton, Ohio, company whose Lexis service is West’s biggest competitor, told him it has not been contacted in connection with the probe.

"West has been criticized in the past by smaller companies," says the Journal, "for the tight grip it has on case-law citation, essentially a numbering system that is the de facto standard for citing information gleaned from court suits and legal opinions."

West has a copyright on the citation system and, O’Brien writes, "has aggressively litigated to prevent competitors from using it in their own legal-research products. Small companies say a public standard for case-law citation, accessible to all research providers, would allow innovative and cheaper alternatives to Westlaw."

He also noted that early last month, the Justice Department itself came under fire from small businesses and public-interest groups that said plans for a $50 million contract from the agency for legal research

were skewed in favor of West and Mead.

"Since then, the Justice Department has said it will explore ways of improving public access to legal research, including development of a nonproprietary citation system," the Journal reports, adding the agency has scheduled an Oct. 19 conference in Washington to consider ways of implementing such a system.

** Businesses Report More Crashes **

A new Gallup survey of 250 corporations has found large computer systems are failing more often these days. According to a poll commissioned by Computer Reseller News, systems were down an average of 2.1 hours a week in 1994, compared with 1.6 hours in 1993.

"Technology experts believe that the change stemmed from the migration of many companies from reliable mainframes to newer, and perhaps less reliable, client-server systems," reports say. "That technology, which uses powerful computers to serve information up to numerous PCs, is extremely complex and still has many problems."

Sources say "this is not an academic consideration," pointing out that about a quarter of the respondents said failures cost them $1,000 to $5,000 an hour, while another quarter said it could cost them up to $50,000 and 1 percent said it cost them $1 million or more.

** Bomb Created From BBS Data **

A 15-year-old Hoover, Alabama, girl has lost part of her hand after she accidentally detonated a bomb her boyfriend learned to make through a computer bulletin board system.

Reports say that Katy Hurn, who was in satisfactory condition after surgery late last night, had been looking at the bomb -- a canister filled with flammable liquid that could be detonated with a battery -- when she accidentally set it off.

Police Capt. Nick Derzis said that half the girl’s hand was destroyed in the blast.

He said the 15-year-old boyfriend "was going to blow up a big rock for her, but she knelt down and touched the device to the battery by accident, and it went off."

The unidentified boy was charged with assault in a juvenile court petition.

** ’Flying Toasters’ Lawsuit Dismissed **

A copyright infringement suit filed by former rock group Jefferson Airplane, claiming that Berkeley Systems Inc. stole the "flying toasters" artwork from a 1973 album cover for its computer screen saver, has been dismissed by a federal judge in San Francisco, California.

Judge Fern Smith ruled the rock group failed to secure separate copyright protection for the album cover design of "Thirty Seconds Over Winterland" -- as was required in 1973 by the copyright law. Conse-

quently, the group cannot sue for infringement in 1994.

The flying toasters portrayed in "After Dark" is Berkeley’s most popular screen saver program. The company insists the program was independently created in 1989. "We were completely unaware of the album at the time," they said.

** U.S. Government Puts Bills Online **

The U.S Government Printing Office (GPO) now has all Congressional bills available online.

For the time being, there is a price attached to much of that information, but public activists hope to convince the government that citizens should have "free" access to information for which they have already paid taxes.

According to the GPO, The Congressional Bills database contains all published versions of House and Senate bills introduced since the start of the 103rd Congress. The Congressional Bills database joins the official Government versions of the Congressional Record and the Federal Register that have been offered in electronic format over the Internet through the GPO Access service since June.

Cost to access the databases can be as high as $105 per month and that charge was the focus of a meeting on Tuesday, Oct. 4, between Wayne Kelly, the Superintendent of Documents and representatives of the Telecommunications Policy Roundtable in Washington.

On the agenda is a Taxpayer Assets Project (TAP) proposal, "Free after Six," which would suspend all database access charges during non-business hours. TAP was founded by Ralph Nader to monitor the management of government property, including information systems and data.

The Congressional Bills and the Record and Register databases are also available for free electronic searches to walk-in patrons of many of the nation’s 1,400 depository libraries under a "GPO Access" program authorized by law and launched in June. The Depository Library System includes academic, public, law, and Federal libraries. There is at least one Federal depository library in every Congressional district.

Information about how to subscribe to the Congressional Bills, Record, or Register databases is available by calling GPO at 202-512-1530 or by fax at 202-512-1262.

** US Congress Studies Internet Access **

Federal lawmakers are looking for ways to make access to Internet more affordable, especially for rural Americans.

A House Science subcommittee heard testimony yesterday that Americans could gain access to the Internet less expensively if they could connect through libraries or community-based computer bulletin board systems.

"The biggest obstacle is long-distance fees," sources say, since "unlike most urban areas, rural areas don’t have local links to the Internet."

Chairman Rick Boucher, D-Virginia, commented, "The long-distance telephone charge averages $15 per hour during the daytime."

CREATIVE CUTS PRICES ON ENTRY-LEVEL MULTIMEDIA

Leads the Market in Providing Affordable and Accessible Multimedia Capabilities

SINGAPORE --October 3, 1994 -- Creative Technology Ltd. (Nasdaq:CREAf) has announced price reductions on its "value" line of Sound Blaster sound cards and the Discovery 16 bit and OMNI-CD multimedia upgrade kits, providing the nation's 68 million owners of non-multimedia PCs with entry-level access to the industry's leading multimedia option. These price cuts only pertain to products sold in the U.S., Canada, Latin America and Mexico. "Sales of multimedia titles and applications are exploding--owners of non-multimedia PCs need an affordable means to access this new technology," said Creative's vice president of sales Greg VandenDries. "By reducing the prices on the lower end of our extensive product line, we're providing the end-user an extremely cost-effective alternative to replacing the entire PC. Creative is committed to bringing multimedia to the masses."

Product	Former Price	New Price	Reduction
Sound Blaster Value Edition	$79.95	$69.95	12%
Sound Blaster Pro Value Edition	$115.95	$105.95	8%
Sound Blaster 16 Value Edition	$149.95	$139.95	7%
Sound Blaster Discovery 16 Bit (w/ Internal 2X CD-ROM)	$449.95	$349.95	22%
Sound Blaster OMNI-CD	$399.95	$299.95	25%

In addition to its wide family of Blaster products and its aggressive pricing strategy, Creative's commitment is augmented by its recently announced Vibra audio chip sets, which allow its OEM customers to design Blaster-compatible PCs, portables, and add-in cards.Creative has also dropped the prices for its ShareView line of desktop video communications products for the Macintosh platform. Effective immediately, ShareView 300 will retail for $749 (a 25% reduction from the former S.R.P. of $999) and ShareView 3000 will retail for $2,499 (a 38% reduction from its former S.R.P. of $3,999).

Creative Technology Ltd. develops, manufactures and markets a family of sound and video multimedia products for IBM-compatible PCs. The company's Sound Blaster sound platform enables IBM-compatible PCs to produce high-quality audio for entertainment, educational, music and productivity applications, and has been accepted as the industry standard sound platform for PC-based software.

Sound Blaster, Creative VoiceAssist, Screen Singer, Sound Blaster Discovery CD, and Sound Blaster Edutainment CD, Sound Blaster Edutainment EZ 16, Sound Blaster Digital Schoolhouse are trademarks of Creative Technology Ltd. E-mu is a registered trademark of E-mu Systems, Inc. and ShareVision is a registered trademark of ShareVision Technology Inc. All other trademarks are property of their respective owners and are hereby recognized as such.

Creative Introduces Vienna SF Studio Editor for Sound Blaster AWE32 Audio Cards

Additional SoundFont Banks Now Available

SINGAPORE -- October 3, 1994 -- Creative Technology Ltd (Nasdaq:CREAf) today announced Vienna SF Studio, a new editing software package that allows users to create, edit and download sounds onto the company's Sound Blaster AWE32 audio cards. The introduction of Vienna SF Studio differentiates Creative's Sound Blaster AWE32 family from other wave table audio boards by providing developers and music hobbyists with a means of enhancing their applications and MIDI music with customized, individualized sounds and effects through the AWEs' downloadable SoundFont technology.

Downloadable Technology

Sound Blaster AWE32 and Sound Blaster AWE32 Value Edition (announced today) provide onboard RAM for downloading SoundFont Banks. These banks are libraries of instruments and sound effect samples that complement the General MIDI and GS SoundFont Banks available with the AWE32. They can be created by the user with Vienna SF Studio or can be purchased directly as stand-alone products.

According to Arnold Waldstein, director of software marketing and developer relations for Creative Labs, Inc., "The combination of Sound Blaster AWE32 and the Vienna SF Editor provides a complete yet unique PC audio solution. By offering true wave table capabilities in a customizable architecture, developers now have the ability to create virtually any sound, thus producing a wider and deeper base of sound options to enhance and differentiate their applications."

Vienna's Features

Vienna's patch editing tools allow the user to edit single banks of melodic and percussive instruments. With Vienna, a user can modify the way a sample is performed by editing volume levels, pitch, timbre, tuning and effects. In fact, multiple SoundFont objects can be created from a single sample. Vienna also allows supports multi-layering and multi-sampling capabilities, enabling the user to embed multiple samples within a single instrument and create complex instrument sounds using primitive samples.

Vienna Availability

Vienna SF Editor will be bundled with Sound Blaster AWE32. For AWE32 Value owners, it will be available as an upgrade for $13.95 through Creative Labs Customer Service at 1-800/998-1000.

SoundFont Banks

In addition to user-created SoundFont Banks, SoundFont Banks created by

professional sound designers are currently available directly from E-mu Systems, Inc. E-mu Systems, a subsidiary of Creative Technology and industry leader in pro-audio instruments and technology, is the leading developer and provider of SoundFont technology. Presently, SoundFont Banks can be purchased on floppy disks, but will be available on CD-ROMs early in 1995. E-mu's initial offering of seven SoundFont banks consists of: Rock Instruments, B-3 Organ, Haunt Fonts (spooky sound effects), World Instruments, Nine-Foot Grand Piano, Seven Foot Grand Piano, and Woodwinds. Starting in October, E-mu plans to release 10 to 20 additional new SoundFont Banks each month.

"SoundFont technology implements what we've learned about interactive soundtracks from our experience working with professional musicians and Hollywood," said Bill Snow, vice president of the merchant semiconductor group at E-mu Systems. "With Creative we are bringing our pro-audio expertise to the PC platform for the development of interactive soundtracks. Ultimately, SoundFont Banks provide the title developer with more options and a broader range of instruments and effects."

SoundFont Banks have a suggested retail price of $29.95 each and can be ordered by calling E-mu Systems at 408/438-1921. Information regarding SoundFont Banks can be obtained through the Internet (soundfont@emu.com) or by calling Creative Labs' fax back number 408/428-2389 and requesting document #1010.

Restrictions

Developers wishing to publish E-mu SoundFont Banks in their soundtracks can do so by first signing a license agreement with E-mu and pay a one-time $200 fee per published title. Developers who create SoundFont Banks from their own .WAV files and add articulation data with the Vienna SF Studio Editor do not need a distribution license. The SoundFont compatibility logo will be made available to licensed developers.

Founded in 1972, E-mu Systems is a leading provider of innovative digital audio products based on digital sampling technology for the musical instrument multimedia markets. The company is a wholly owned subsidiary of Creative Technology, Ltd., and is headquartered in Scotts Valley, California.

Creative Introduces Sound Blaster AWE32 Value Edition

SINGAPORE -- October 3, 1994 -- Creative Technology Ltd (Nasdaq:CREAf), the leading provider of multimedia hardware for the PC environment, will begin shipping Sound Blaster AWE32 (Value Edition in October at a suggested retail price of $329.95. AWE32 Value will offer users a cost-effective means of obtaining the Advanced WavEffects(realistic instrument and sound effects capabilities that, up until now, had only been available from Creative's top-of-the-line AWE32 audio card.

"Sound Blaster AWE32 Value Edition is the right product at the right time. It features both advanced wave table technology from E-mu Systems and CD-quality audio at an extremely affordable price," said Rich Sorkin, director of audio product marketing for Creative Labs, Creative Technology's U.S. subsidiary. "As an increasing number of wave table software titles hit the marketplace, the demand for high-performance,

Sound Blaster compatible wave table synthesis audio boards continues to grow. AWE32 Value is the ideal solution for users who want enhanced audio playback from their entertainment titles as well as for those users who want to create and edit their own high-quality MIDI music."

Advanced Wave Table With Special Effects

Many of the features of Sound Blaster AWE32 Value are traditionally only available with high-end professional audio products that often cost thousands of dollars. Based on E-mu Systems' EMU8000 integrated advanced audio DSP which provides multi-timbral MIDI channels with 32-voice polyphony as well as independent control of advanced special effects (reverb, chorus or QSound), vibrato (pitch oscillation) and tremolo (volume oscillation) for each of its 32 voices. Additional advanced audio features include state-of-the art pitch-shifting techniques, resonance filters that control the timbre of each instrument when played at different dynamic levels, a six-part amplitude envelope, and a six-part auxiliary envelope for independent controlling of pitch and timbre.

Vienna SF Editor

Sound Blaster AWE32 Value supports E-mu Systems' SoundFont(audio library of sampled sounds, which have been widely regarded as the finest musical instrument and sound effects samples available.

Creative's Vienna SF Editor(editing software (also announced today), allows users to create and edit individualized sounds on the company's line of Sound Blaster AWE32 audio cards. The software, when used with AWE32 and AWE32 Value Edition, enables users to add to the cards' on-board library of sounds by letting them download and edit SoundFont* Banks. Vienna SF Editor has begun shipping with AWE32 and is available as an upgrade for AWE32 Value owners for $13.95 through Creative Labs Customer Service at 1-800/998-1000.

"Sound Blaster AWE32 Value combines Creative's powerful PC audio technology with E-mu System's renowned pro-audio capabilities," added Sorkin. "When used in tandem with our new Vienna SF Editor, the AWE32 family provides a range of audio solutions that brings high-end sound capabilities to the PC marketplace."

Compatibility

As with Creative's entire family of standard-setting 16-bit audio boards, Sound Blaster AWE32 Value offers 16-bit CD-quality stereo sampling and playback up to 44.1 kHz. Sound Blaster AWE32 Value supports the Sound Blaster platform and is fully compatible with General MIDI, Sound Canvas and MT-32 specifications. The audio card also supports three of the most popular single and double speed CD-ROM drives on the market from Sony, Mitsumi, and Creative.

CREATIVE TECHNOLOGY LTD
(Incorporated in the Republic of Singapore)

ANNOUNCEMENT

The Board of Directors of Creative Technology Ltd (the "Company") is pleased to announce that the Company has on (23 September 1994) signed an Agreement and Plan of Reorganization to acquire the whole of the share capital of Digicom Systems, Inc. ("DSI"), a company incorporated in the State of California, USA (the "Acquisition"). The Acquisition will take the form of a merger under the State of California’s laws.

DSI, a private company based in Milpitas, California, USA, develops, manufactures and markets modem technology and products such as modem add-in boards and modem modules of up to 14.4 Kb for the consumer market as well as rack mounted modems for the high-end market. The Company plans to integrate telephony capabilities into its future Sound Blaster products.

The consideration of the Acquisition will be US$21.8 million in cash. The consideration was arrived at on a willing buyer and willing seller basis. The completion of the Acquisition is subject to various conditions, including, among others, the receipt of all required regulatory approvals.

The Acquisition will be financed by the internal cash resources of the Company and is not expected to have a material impact on the consolidated net tangible assets and earnings per share of the Company for the financial year ending 30 June 1995.

Pacven Investment Ltd, which was a past substantial shareholder of the Company, currently owns 6.57% of the equity interest of DSI. Save as disclosed, none of the Directors or substantial shareholders of the Company have any interest, direct or indirect, in the Acquisition.

WHAT WOULD YOU DO? AT HOME

The Kids' Computing Corner

review by Frank Sereno

"What Would You Do? At Home" is the first in a series of CD-roms from Digital Theater which teach children how to react safely in many different situations by coloring in storyboards of these scenarios. This multimedia title is intended for children ages six to ten and is available for IBM compatible systems running DOS. WWYD requires four megs of hard drive space, at least 530k of free conventional ram and four megs total ram, a 386DX-25 CPU, a mouse, a Sound Blaster compatible sound card, SVGA graphics and a CD-rom drive.

Installation is done by running the INSTALL.EXE file on the CD-rom. The installation program will create some directories on the hard drive for storing saved artwork and will modify the config.sys and autoexec.bat files for the path and memory requirements of the program. The program is run with the WWYD.BAT file on the CD-rom. If you experience flashing problems in the video, you can run the WWYDVESA.BAT file which installs a universal VESA video driver for older video cards.

The main screen consists of eight lesson or story icons arranged in an arch above a house. The house is divided into four sections in which lists can be compiled of emergency phone numbers, information for babysitters, telephone numbers for the children's friends and an at-home-alone checklist. Information is typed in and is then saved to the hard drive. These files can be printed out for easy reference. Unfortunately, this information is not protected from curious children. Above the house is the WWYD logo and a question mark. By clicking on the question mark, you can start the instructional demo on operating the program. To the lower right of the house is the Digital Theater logo which will display the program credits. Directly below the house is a space for the child's name, which will automatically be inserted in his artwork. The stop icon is located in the lower left corner of the screen. Besides the icons, hotspots on the main screen will activate short animations when clicked

upon.

WWYD At Home features, eight scenarios which a child may face when home alone. These are a prowler, locked out, natural gas leak, obscene phone call, sick pet, stranger at the door, broken water pipe and fire next door. Clicking on an icon opens the storyboard screen. On the left side of the screen, the five frames of the story will be shown. To the right, a movie "clapper" is shown. Clicking on this will start a presentation of the story. Below the clapper are six more icons. A stop button exits the program. A question mark displays a help screen. Clicking on the icons within this help screen will generate an audible description of the icons' meanings. The floppy disk icon brings up a file menu for saving or loading the child's presentations. Filenames are not generated automatically so parents should help children to choose a proper eight character filename. A pencil and paper icon represents the activity sheet. This sheet features questions which expand and reinforce the lessons learned from completing each story. A parent should help the child with this section. A musical note is the icon for selecting the musical background for the storyboard. The child can choose from eight musical styles. The final icon is the house which returns the child to the main screen when clicked upon.

Clicking on a story frame begins the coloring portion of the program. Painting is done by choosing a color and fill pattern and then clicking on the area of the scene to be colored. Most of the screen is filled with the picture to be colored. Across the top is the text for the scene. It will be read aloud when it is clicked on. Along the bottom of the screen are the different colors which can be used. An arrow button on each end of the row of colors allows the child to cycle through the many different colors. In the lower left corner is a number indicating which scene is being worked on with plus and minus arrows on either side for cycling through the scenes.

Along the right-hand side of the screen in a vertical row are more icons. First is a stop icon for quitting the program. Next is a question mark icon which will bring up help. Below that is a clapper icon for returning the child to the storyboard page. Next is an icon of a printer for printing out the scene. A house icon is used to go back to the main menu. The next icon allows the child to select a wipe which will be used after the scene is displayed in the presentation mode. The next icon shows a hand with a rag and this will clear the screen of all current work. An eraser icon will undo the last action, including restoring all work if it is accidentally cleared. A pair of scissors represents the prop page. Props can be chosen by clicking and then dragging them into place on the scene. The final icon is a palette which will cycle through the fill patterns.

The graphics used in this program are better than average in the main screens. The scenes to be colored are very simple so that it is easier for children to click and fill the scenes. The animations in the main screen and the demo run smoothly. The sounds in this program are very good. The narration is clear and easy to understand. The music used in the program will start your toes to tapping. The sound effects are distinct and appropriate. The interface could use improvement. This program has many areas that require adult supervision. Sometimes, such as filling out the activity sheet, parental interaction will reinforce the lessons learned from the stories by helping the child type in the correct answers. On the other hand, the information lists should be passworded so only parents can enter the data. The file handling is very clumsy and should be made simpler for children. The controls for operating the

storyboard presentations and coloring each scene are quite good although I would like to see an improvement in the color cycling. Only one or two mouse clicks should be needed to bring up all the colors available in each hue rather than clicking through all the color combinations until the one which you want becomes available.

Play value may be a bit limited. Most children will probably color all the pictures (forty in all) a few times and then find no replay value in the software. This program is very slow when used on a single-speed CD-rom. Most likely I will be upgrading my children's system to at least a 486DX-33 with a double-speed CD-rom. This is the minimum system I can recommend to anyone seeking a multimedia IBM compatible computer. On educational value, the program does cover some very important topics but it doesn't explore these topics deeply enough. It is basically a springboard for bringing up these topics with your children. You will then need to provide greater detail on how to handle these situations. Considering the vast amount of space on a CD-rom and the cost of the program, more topics should have been included also. I purchased this program for $30 and while I am not disappointed enough to return it, I suggest that anyone considering purchasing this program preview it before purchasing it. Digital Theater does have a thirty-day money back or exchange guarantee on this item. For more bang for the buck, you may consider purchasing the book the program is based on instead. That book is "What Would You Do?" by Linda Schwartz and it is published by The Learning Works.

Graphics 8.5
Sounds 9.0
Interface 7.0
Play Value 6.5
Educational Value 6.5
Bang for the Buck 6.0
Average 7.25

Edmark News Release

September 28, 1994

Edmark Releases Three Award-Winning Titles on CD-ROM

Edmark Corporation announced that the award-winning Millie's Math House, Sammy's Science House and Thinkin' Things Collection 1 will be released on CD-ROM in mid-October. Each title will be available for both Macintosh and Windows/MS-DOS computers.

"Many of our customers are building educational software libraries for their children and have hard drives that fill up very quickly," said Sally Narodick, Edmark's CEO. "In response to our customers' requests to help them conserve precious hard disk space, we're happy to be offering all of our award-winning products on CD-ROM."

Product Descriptions

Millie's Math House: The first of three titles in Edmark's Early Learning Series, Millie's Math House gives children ages two to five the building blocks they need to develop a solid foundation in math. Kids learn about numbers, counting, patterns, shapes and sizes with Millie the cow and her

lively friends. They can try shoes on friendly blobs, design animated bugs, operate a jelly bean cookie machine, build mouse houses, count wiggling critters, and make patterns with talking animals and shapes. Millie's Math House has received thirteen major consumer awards for superior educational content and interactive design.

Sammy's Science House, for kids ages three to six, helps bring the wonderful world of science alive for children. The five activities in Sammy's house give kids an early introduction to fundamental science skills like observation, classification, comparison and sequencing. Kids create machines and toys, explore weather conditions, create short films by arranging frames in order, sort pictures of plants, animals and minerals, and discover how nature and wildlife change from season to season. Just released in July, Sammy's Science House recently won the Directors' Choice Award from Early Childhood News.

Thinkin' Things Collection 1, for kids ages four to eight, is the first in Edmark's series designed to help kids build strong thinking skills. Kids explore musical patterns and build memory sills with the friendly Oranga Banga and Toony Loon; they develop predictive and investigative skills by experimenting with the colorful musical Flying BLOX; they learn to recognize relationships as they analyze attributes of Fripples; and they build their understanding of rule formation and patterns as they create the requested Feathered Friends. Thinkin' Things Collection 1 has received nine major awards for educational excellence since its release only one year ago.

New CD-ROM Releases Featured in Free KidDesk Holiday Promotion
---

Millie's Math House, Sammy's Science House, and Thinking' Things Collection 1 CD-ROMs will be among the products featured in Edmark's "FREE KidDesk Inside" holiday promotion. Throughout the holiday season, Edmark will offer KidDesk, the award-winning children's menuing and desk accessory program, free to buyers of these Edmark Macintosh and Windows/MS-DOS software titles: Bailey's Book House, Millie's Math House, Sammy's Science House, Thinkin' Things Collection 1, and Thinkin' Things Collection 2. This offer, a $40 value, is effective October 15.

DIAMOND COMPUTER SYSTEMS
Product Support Department

UPGRADE EXCHANGE PROGRAM

OBJECTIVE: The purpose of this program is:

- To increase customer service by adding a customer requested program.
- To offer an unique program which is state of the art.
- To convert users from competitor's product to Diamond 's products.
- To update users of obsolete product to current product to aid technical support.

PROGRAM OUTLINE:

- Customer's video board is exchanged for a current product at a promotional price.
- All Diamond video boards are included in the program.
- All competitor's products are included in the program.
- The program will utilize the current RMA system.
- All boards will have the same exchange value.
- Contact Diamond Customer Service for procedures.
- Domestic customers only

:HOW TO GET YOUR OWN GENIE ACCOUNT:

Set your communications software to Half Duplex (or Local Echo)
Call: (with modem) 800-638-8369.
Upon connection type HHH (RETURN after that).
Wait for the U#= prompt.

Type: XTX99587,CPUREPT then, hit RETURN.

HEADS UP! HERE'S A DEAL!

Fire up that high-speed modem and head for your favorite GEnie Software Library! Effective October 10, 1994, you'll be able to participate in an open beta test, offering access to GEnie Services at 9600 bps for as little as $5.00 per hour.

As a result of an arrangement with Sprint, GEnie will be offering 9600 bps access from almost 300 SprintNet locations. Best of all, this high-speed access will not be subject to high-priced surcharges. The normal $2.00 per hour SprintNet surcharge will apply...even at 9600 bps! This open beta test is expected to run through the end of the year.

To find the number of the SprintNet access number nearest you, simply type PHONES at any GEnie menu prompt (or use the "Move To Keyword" option in Genie for Windows and type PHONES). Remember, this rate applies only to 9600 bps access via SprintNet. So be sure to choose the access number showing "9600" in the "Baud Rate" column AND "SprintNet" in the "Network" column.

From the "Fine Print" department, please note that the $2.00 per hour surcharge for SprintNet access is applicable even during your initial four hours of monthly usage.

So, whether you're into downloading software, reading bulletin boards, or accessing databases, it's about to become cheaper to do it faster!

> BJC-4000 STR FOCUS! Canon's NEW Bubble Jet 720dpi
  """""""""""""""""""

THE SPEED OF A LASER PRINTER
&
THE BEAUTY OF COLOR

Canon brings you the best of both worlds with the BJC-4000...

If you thought you could only get high quality black and white output from a laser consider Canon’s new BJC-4000. You’ll find the BJC-4000’s 720x360 dot per inch resolution very impressive. Yet, speed is not sacrificed for high quality print. At five pages per minute this Bubble Jet surpasses the print speed of today’s many personal inkjet printers.

These features are only part of what makes the BJC-4000 extraordinary. Enjoy beautifully vibrant colors on a wide variety of media including plain paper, coated paper, transparencies and envelopes. Your range of colors is virtually unlimited. Within Windows there are 16.7 possible colors you can create. Our ink cartridge system is designed with convenience and cost savings in mind. There is a separate ink tank for blue printing only or a tank with cyan, magenta, and yellow for black and color output.

Concerned about compatibility? It’s not an issue with the BJC-4000. Three resident printer control modes and a Windows 3.1 driver make the BJC-4000 compatible with most applications. A Quick Start guide, On-Line guide and easy to use manual are all included to help you get started immediately. A wide variety of 20 TrueType scaleable fonts and 7 bitmapped fonts allow you to create professional looking reports and correspondences, or lively presentations & invitations.

As with all Canon peripheral products we provide an extended hour, toll-free technical support line and the new InstantExchange two-year, 24-hour replacement warranty, all cost-free. Feel confident you won’t have to face long periods of downtime. (see below).

You’ll find we only conserved in two areas - the size and the price. At 14.4 inches wide, 8.1 inches deep and 7.3 inches high, the BJC-4000 fits nicely on most desktops while leaving plenty of room to spare. With a MSRP of $549 you can now afford the speed of a laser and the beauty of color.

To get product literature, a print sample, or locate an authorized Canon dealer call 800-848-4123.

CANON’S INSTANTEXCHANGE PROGRAM
CREATED SO YOU DON’T HAVE TO WORRY ABOUT DOWN-TIME

Another aspect of Canon’s outstanding customer support is the New InstantExchange 2-year warranty. It’s fast, easy to use and best of all, it’s free. A representative from our 800 toll-free technical support line will help determine if a hardware problem exists with your printer or scanner. From there you have the option of having a fully tested replacement unit immediately dispatched next day express. Within most cases customers are up and running within 24 hours.

This offer is effective beginning August 15 and applies to all Bubble Jet Printers, Laser Beam Printers and Scanners. Call 800-848-4123 for product literature or print samples or to locate your local authorized Canon dealer.

Huge Price Cuts on All Canon Bubble Jets & Scanners

As of September 1, we've reduced the price on all Bubble Jet Printers and Scanners by as much as 30%. It's part of an ongoing effort to bring customers the right mix of product features at very affordable prices. A wide array of products and prices meet the needs of our increasingly diverse customers:

BJ-10sx:
The affordable, portable printer for customers on the go demanding high quality output, now listed at $289

BJ-100:
Best entry-level buy on the inkjet market today, now listed at $249

BJ-200e:
Best selling, award winning, high quality laser text and graphics at a fraction of a laser printer's cost, now listed at $299

BJ-230:
Compact design, laser performance with 11X17 handling, now listed at $449

BJC-600:
Brilliant color printing with a cost-effective, four-color cartridge system, now listed at $579

BJC-4000:
Fast speed, high resolution, black and white printing with outstanding color capabilities, listed at $549

IX-4015:
Easy to use, professional quality, color scanner now listed at $969

All of these printer and scanner products are covered by CCSI's new InstantExchange program, a two-year warranty which offers optional 24-hour replacement free of charge (see above). For product literature or to locate a dealer near you call 1-800-848-4123.

> Canon GrayScale IX-3010 STR Spotlight

Canon NEW IX-3010 GRAYSCALE SCANNER
==========

:A POWERFUL COMBINATION:
==========

The New IX-3010 Grayscale Scanner & OmniScan Plus 3-in-1 Productivity Software

With the IX-3010 your desktop becomes a high-productivity office. We

maximize your investment by including many useful software packages. OmniScan Plus by Caere has Optical Character Recognition (OCR), Image Editing, and a photocopy function. OCR lets you scan documents right into your wordprocess or spreadsheet program. Then you can edit the text just as if you had typed it yourself. Scan a photograph or other image then modify it easily with the image editing feature. You can photocopy a document with the touch of one button when combined with your printer. There's also PageKeeper Portfolio used to index, then find and retrieve existing documents, faxes, or scanned documents. For added flexibility we've included a TWAIN driver so the IX-3010 is compatible with today's most popular scanning software applications.

If you expect consistent, high quality output you won't be disappointed with the IX-3010. Featuring 1200 dot per inch (dpi) resolution (300 dpi optical) it accurately reproduces scanned images in 256 shades of gray or black and white. Plus, we use a Xenon lamp which is designed to never burn out or flicker. The light weight, compact design and optional sheet feeder let you tackle both high and low volume projects without using the entire desktop.

The IX-3010 comes with the new InstantExchange 2 year limited warranty. It's one of the most convenient service warranties in the industry. (See "Canon's InstantExchange Program Created So You Don't Have to Worry about Down-Time") All Canon peripherals include InstantExchange as well as extended hour technical support - both cost free.

If you'd like product literature or the location and number of your nearest authorized Canon dealer call 1-800-848-4123.

HP SETS NEW STANDARD
FOR
NOTEBOOK PRINTERS

Improved Print Quality and Easy-To-Use Color Redefine Mobile Printer Market

PALO ALTO, Calif., Oct. 3, 1994 -- Setting a new standard for motebook printers, Hewlett-Packard Company today unveiled two compact inkjet printers that feature excellent print quality and easy-to-use color with HP's breakthrough ColorSmart technology. The new printers -- HP DeskJet 320 for notebook PCs and the HP DeskWriter 320 printer for Macintosh PowerBooks -- offer the highest-quality output of any printers in their class, according to HP.

The printers are each $379 (U.S.), the same price as the market-leading DeskJet 310 and DeskWriter 310 printers they replace in the United States, Canada, Latin America and Europe.

Used in the office or on the go, the printers provide professional

black-and-white and color documents quickly and easily.

They weigh 4 pounds each and are approximately half the size of a standard notebook PC. This small, lightweight design provides portability without sacrificing print quality. In fact, with a resolution capability of 600x300
dots-per-inch (dpi), these printers offer the same print quality as HP's moreexpensive personal inkjet printers. Output is further improved through HP-developed Resolution Enhancement technology (REt). In addition, the two mobile printers include HP's revolutionary ColorSmart technology, which optimizes color settings automatically to provide the most vivid color graphs, text and pictures.

"The DeskJet 320 and DeskWriter 320 printers advance the standard of mobile color printing to a new level," said Craig O. Rittenhouse, the DeskJet/DeskWriter 320 product manager in the U.S. "Now users can achieve the same level of print quality and functionality on the road as they do at home or in the office."

While the new printers offer the highest dpi resolution of any mobile printer on the market today, their superior print quality is the result of a number of other factors, including HP's Resolution Enhancement technology. REt, now incorporated into all of HP's DeskJet printers, applies ink dots intelligently, so that output is crisp and clear, edges are noticeably smoother and curves are rounder.

The DeskJet 320 and DeskWriter 320 can print more than three pages of black text per minute and a color page in about four minutes. The printer supports a variety of media, including letter-, legal- and A4-size cut-sheet paper; transparency film; and labels. An optional cut-sheet feeder ($99 U.S.) offers automatic feeding of up to 60 sheets of paper or 20 sheets of transparency film.

A Growth Market

The number of people who work out of the office fully or part-time is growing at an enormous rate," said Rittenhouse. "Even though they are away from the office, users are unwilling to compromise on any of the functionality of their desktop printers. Now, with the DeskJet 320 printer, they can be assured that documents created on the road or at home will look as good as those created in the office. In fact, by simply snapping on the automatic sheet feeder, users can transform the printer into an ideal desktop printer."

According to Link Resources, New York-based market-research firm, the number of people performing work outside of the office -- home or on the road -- grew by more than 5.4 percent in 1993, reaching more than 40 million persons. HP believes these new products will further increase the demand for portable notebook printers. International Data Corporation (IDC), a Framingham, Mass.- based consulting firm, for example, projects that the total number of U.S. portable printer shipments will grow from 138,800 units in 1990 to 1.2 million in 1995, with the value of shipments growing from $52.3 million in 1990 to $351.3 million in 1995.

Tools For The Road

The HP DeskJet 320 and the HP DeskWriter 320 printers can be powered by either a battery or an AC adapter. The battery permits up to 100 pages of black-and-white printing and takes approximately six hours to fully recharge in the printer. For those with extensive portable-printing needs,

a worldwide rapid recharger is $99 (U.S.). It holds two batteries, each of which can be fully recharged in one hour (sequentially). The recharger also can be used as an AC power adapter.

An optional carrying case, which is designed to hold the printer, cut-sheet feeder (3.2 pounds), portable PC and accessories, makes it easy to transport everything needed to create high-quality documents and presentations, anywhere, anytime.

Easy Color

The DeskJet 320 and DeskWriter 320 printers provide high-quality color output without compromising black text quality. A color kit, which consists of a "snap-in" color cartridge and compact storage case, is $49.00 (U.S.). The user simply exchanges the color cartridge for the black print cartridge provided with the standard printer.

The DeskJet and DeskWriter 320 printers come complete with HP’s ColorSmart technology. First introduced with the HP DeskJet and DeskWriter 560C printers, ColorSmart technology has revolutionized color printing in much the same way that autofocus cameras revolutionized 35 mm photography.

ColorSmart eliminates the uncertainty and frustration often associated with color printing by automatically making color choices that enhance the quality of text, charts and photographs. The result is color that is optimized for the printed page -- consistently vibrant, clear and pleasing to the eye.

A replacement color cartridge is $34.95 (U.S.). A replacement black cartridge is $21.95 (U.S.).

Ready To Use

The DeskJet 320 printer is supported by all major DOS and Microsoft Windows (TM) 3.X applications. It has six built-in typefaces (four portrait and two landscape). Windows users have access to 14 scaleable TrueType fonts. The DeskWriter 320 printer ships with a QuickDraw driver, which includes 35 scaleable fonts. The printer supports Apple’s ColorSync WYSIWYG color-imaging standard for Macintosh System 7.0.1 users. Both printers support ATM and TrueType fonts.

The DeskJet 320 printer comes with a Centronics parallel interface. The DeskWriter 320 printer has an RS-422 serial and an AppleTalk interface. Custom-designed cables are also available for the printers.

Warranty

Both printers come with a one-year worldwide limited warranty and are available from HP authorized dealers. An extended three-year limited warranty that includes HP’s 24-hour express exchange is available for $49 (U.S.).

HP INTRODUCES ITS MOST AFFORDABLE DESKJET PRINTERS

FOR THE HOME MARKET

Now All DeskJet Printers Offer Color

as Standard or Optional Feature

PALO ALTO, Calif., Oct. 6, 1994 -- Hewlett-Packard Company today introduced its most affordable DeskJet printers -- the HP DeskJet 540 printer for PCs and the HP DeskWriter 540 printer for Macintosh -- at $365 (U.S.). They are targeted for the rapidly growing home market and set new standards for ease-of-use and performance. These monochrome printers offer an easy-to-add color option for home users who do not want to be locked out of color printing in the future. Now, all HP DeskJet printers offer color as a standard or as an option.

The two printers offer the industry's highest level of black-print quality in a new, slimmer industrial design. The printers' new firmware and software driver now automate the entire printing process, making the DeskJet 540 the industry's easiest printer to operate.

The DeskJet 540 replaces the DeskJet 520 and the DeskJet 500C, the best-selling monochrome and color-optional printers in the world. The DeskWriter 540 replaces the company's successful DeskWriter and DeskWriter C models for Macintosh. Easy-to-add Color and ColorSmart Technology

Anticipating the home market's increasing need for versatility, the DeskJet 540 and DeskWriter 540 printers offer an affordable color upgrade kit for $49 (U.S.), which includes a snap-in color cartridge and a storage container for safe keeping. HP believes this is the lowest price available for color printing.

The color cartridge can be substituted for the black cartridge in one, easy step. When the hood of the printer is opened, the carriage returns to the center and the cartridge snaps into place. Color-printer users will have the power and convenience of HP's ColorSmart technology, which renders vivid, vibrant color automatically.

ColorSmart uses object identification to recognize text, graphics and photographic elements separately, selecting the optimal color or grayscale tone for each element. By reducing the process to a single step, ColorSmart is revolutionizing color printing in much the same way that autofocus cameras reduce the expertise required for 35 mm photography.

Color and the Home Market

HP shipped more than 5 million inkjet printers worldwide in 1993, of which roughly 70 percent went directly to the home market. HP estimates that more than one-half of the DeskJet printers currently sold are color capable.

According to BIS Strategic Decisions, a market-research firm in Norwell, Mass., the current market for color printers worldwide is expected to quadruple by 1997. Much of this growth is being driven by increased demand for color printing in the home, particularly homes with school-age children. Market analysts believe rapid advancements in color inkjet technology are contributing to this phenomenal growth.

"There has never been so much power for so little money," said Michael Zeis, president of the Blackstone research group in Uxbridge, Mass. "You can get so much done now, in terms of work and entertainment, and that's really what is driving color printing in the consumer market."

Superior Print Quality

According to HP customers, the most important consideration when buying a printer is black-print quality. HP believes DeskJet 540 printers offer the highest level of print quality of any low-cost inkjet printers. This print quality is the result of extensive research and development of ink-delivery systems and can be attributed to a number of specific factors, including the following:

- HP-developed Resolution Enhancement technology (REt) for crisp edges;
- new ink formulations;
- refined print cartridges;
- 600 x 300 dots per inch (dpi);
- improved pen-to-paper spacing;
- better print-cartridge energy management; and
- the most extensive software compatibility in the industry.

As with the entire DeskJet printer family, the new printers excel on plain paper and support a wide variety of other types of media, including bond, coated stock, glossy paper and transparencies.

The DeskJet 540 printers support 256 levels of grayscale for dramatic black graphics, and produce black text up to four pages per minute. With the snap-in color option, the printers offer vibrant 300 x 300 dpi color output as fast as 1.5 minutes per page in the improved EconoFast mode.

Ease of Use and Enhanced Performance

The DeskJet 540 printers are the first to incorporate an extensive bidirectional troubleshooting index, which identifies errors on-line and quickly offers an exact solution. The Print Status Monitor presents "help" directions in simple, colorful graphics designed for novice users.

The printers feature 512K of built-in RAM, improved firmware, a faster processor and new drivers for quicker processing of larger, more complex DOS, Windows and Macintosh files. This results in a 100 percent speed increase in overall throughput compared with the color models they replace. Improvements to the firing rate of the color print cartridge itself offer a 300 percent speed increase in the EconoFast mode, which uses just half the ink of normal or presentation mode.

The DeskJet 540 printer includes four built-in typefaces for DOS users in portrait and landscape orientations, and 14 TrueType scalable fonts for Windows users. The DeskWriter 540 printer offers 35 TrueType scalable fonts.

New Industrial Design

The DeskJet 540 printer and DeskWriter 540 printers feature a

control panel that has fewer buttons, and installation of fonts and driver has been reduced to a single step.

The new, rounded chassis of the DeskJet 540 printer represents the first dramatic design change since the very first DeskJet was launched more than six years ago. The slimmer architecture offers the same reliable paper-handling capability of earlier DeskJet printer models, which HP believes is the best in the industry.

The input tray automatically feeds 100 sheets of paper, 50 transparencies or 20 envelopes. An automatic envelope sensor ensures optimal print quality on envelopes. Additionally, the printer now supports custom paper sizes and heavy card stock, such as 4"x 6" cards.

Warranty, Energy Star and Speed Enhancement for the DeskJet 540 Printer
---

The new printers come standard with a 3-year limited warranty -- the longest warranty in the industry. DeskJet brand printers enjoy the highest customer-satisfaction rating of all inkjet brands worldwide, according to independent research commissioned by HP.

All DeskJet printers exceed the Environmental Protection Agency Energy Star specifications for energy-efficient printers and use approximately 80 percent less energy than dot-matrix printers.

HP is the world’s leading supplier of inkjet printers, with more than 10 million DeskJet printers sold since the first one was introduced in 1984. Last year, more than 5 million DeskJet printers were sold, nearly half of which were color capable. HP DeskJet printers are based on inkjet technology. HP DeskJet printers are sold worldwide through retail outlets and computer dealers. The company has DeskJet product divisions in Barcelona, Spain; Corvallis, Ore.; San Diego, Calif.; Singapore; and Vancouver, Wash.

Hewlett-Packard Company is an international manufacturer of measurement and computation products and systems recognized for excellence in quality and support. The company’s products and services are used in industry, business, engineering, science, medicine and education in approximately 110 countries. HP has 97,900 employees and had revenues of $20.3 billion in its 1993 fiscal year.

IMPORTANT NOTICE!
==========

STReport International Online Magazine is available every week for your reading pleasure on DELPHI. STReport’s readers are invited to join DELPHI and become a part of an extremely friendly community of enthusiastic

computer users there.

SIGNING UP WITH DELPHI

Using a personal computer and modem, members worldwide access DELPHI services via a local phone call

JOIN --DELPHI

Via modem, dial up DELPHI at 1-800-695-4002
then...
When connected, press RETURN once or twice
and...
At Password: type STREPORT and press RETURN.

DELPHI’s 20/20 Advantage Plan
20 Hours for Only $20!

Advantage Members have always enjoyed the lowest DELPHI access rates available. On the new 20/20 Advantage Plan, members receive their first 20 hours of access each month for only $20. If you happen to meet someone online or find some other diversion, don’t worry because additional usage is only $1.80 per hour.

20/20 Advantage rates apply for access via SprintNet or Tymnet from within the continental United States during home time or via direct dial around the clock. Home Time is from 6pm to 6am weekdays. Access during business time carries a surcharge of $9 per hour. These rates apply for most services, but note that there are some surcharged areas on DELPHI which are clearly marked with a "$" sign.

Who is eligible to take advantage of the plan? Any DELPHI member in good standing. Applications are reviewed and subject to approval by Delphi Internet Services Corporation.

It’s easy to join. If you meet the eligibility requirements, you can apply online -- at any time -- for membership in the DELPHI 20/20 Advantage Plan. Your membership becomes active at 4 a.m. Eastern Time on the first billing day of the following month.

The $20 charge will be billed to you at the beginning of the month to which it applies. Any portion of the 20 hours not used in any month does not carry forward into the next month.

Advantage rates may be changed with 30 days notice given online.

TRY DELPHI FOR $1 AN HOUR!

For a limited time, you can become a trial member of DELPHI, and receive 5 hours of evening and weekend access during this month for only $5. If you’re not satisfied, simply cancel your account before the end of the calendar month with no further obligation. If you keep your account active, you will automatically be enrolled in DELPHI’s 10/4 Basic Plan, where you can use up to 4 weekend and evening hours a month for a minimum $10 monthly charge, with additional hours available at $3.96. But hurry, this special trial offer will expire soon! To take advantage of this limited offer, use your modem to dial 1-800-365-4636. Press <RET> once or

twice. When you get the Password: prompt, type IP26 and press <RET> again. Then, just answer the questions and within a day or two, you'll officially be a member of DELPHI!

DELPHI-It's the BEST Value and getting BETTER all the time!

ATARI/JAG SECTION (III)

Dana Jacobson, Editor

> From the Atari Editor's Desk "Saying it like it is!"

The Atari world is still reverberating over the news of the Sega settlement. There have been many speculations as to what that deal signifies. It's not a buy-out; Sega's stock share is a paltry 7.4%. It's an out-of-court settlement, pure and simple. The press release comes across as a public relations effort to make this settlement appear as a friendly agreement which saves face for Sega. The bottom line is that Atari has a much-needed influx of cash - $90 million. For a time when Atari can use it the most for a successful holiday season, what a bonus. Ironically, until that settlement announcement, I hadn't seen a Jaguar commercial. I've seen the "Teacher" and "AvP" ads on numerous occasions since!!

Enough about the Jaguar, we'll get back to it later in the Jaguar section of this issue! A couple of our favorite programs have recently been updated - Flash 2 and STraight Fax!. Announcements for both are listed below. If you own either, don't miss out on these offers!

Joe Mirando's "People Are Talking" column will resume this week, for those of you wondering where it was last week. We've also received a number of comments about Joe's Geneva/NeoDesk 4 review. Joe will be doing a follow-up on both of these programs in a later issue, with more detail.

The next few months should be interesting, so stay "tuned" to STReport for the news!

Until next time...

"""""""""""""""""""""""""

FLASH II

Now shipping version 2.21!
"""""""""""""""""""""""""""

MISSIONWARE SOFTWARE
354 N. Winston Drive
Palatine, Illinois 60067-4132
United States of America
phone 708-359-9565

Missionware Software is pleased to announce the release of version 2.21 of Flash II. This is our fifth update. Flash II originally went up for sale in April of 1992. Version 2.21 fixes a number of problems discovered by our customers and beta testers over the past few months. We’ve added a number of enhancements as well! If you already own a version of Flash II just download the file F22UP.LZH and use it to patch your current version.

Flash II is the update to the most popular Atari ST telecommunications program ever! It’s available exclusively from Missionware Software and at an affordable price! Flash II is completely rewritten by Paul Nicholls of Clayfield, Australia. But don’t let that fool you! Flash II has the same look and feel as previous versions of Flash...plus a slew of new features to boot! And it’s just as easy and fast to use for the telecommunications beginner or pro!

The new features of Version 2.21 include:

* Fully Falcon030 compatible!

* Enhanced DEC VT Terminal emulations including the ability to swap the functions of the Delete and Backspace keys for conformance to standard DEC terminals.

* Enhanced ANSI terminal and graphics.

* History buffer is now included for Type Ahead editor.

* Full support for all Atari serial ports on TT030 and MegaSTe as well as baud rates up to 153600.

* Terminal mode now displays either the real time clock or a timer. When the timer is displayed, it now runs all the time.

* Search-Next mode added in editor. Control-F9 keystrokes can be used for this new function.

* Enhanced DO scripting language, including:

PORT:	Selects the port to be used.
CLOCK:	Selects Clock display in terminal mode.
TIMER:	Selects Timer display in terminal mode.
DBPATH:	Sets path for Block file operations.
KERMIT:	Selects various Kermit transfer options.
BREAK:	Sends a BREAK during script operations

Naturally, all of your old favorite Flash II features are still available:

* DO script files compatible with older versions of Flash!

* All macros use the familiar Flash DO script format!

* Easily setup the parameters for each BBS you call...this includes everything from ASCII upload/download options to baud rate!

* You can program up to 20 individual and separate macros for each BBS plus an additional 10 global macros !

* Displays RLE & GIF pictures either on or off line! You can also save or load these pictures for later review!

* Supports the following terminal types: TTY, VIDTEX, VT52, ANSI, VT100, VT101, VT102, VT200, VT300 & PRESTEL.

* Includes full support for RTS/CTS. This mode can now be turned on and off by the user.

* Includes Automatic Answer mode!

* Includes Auto Boards mode - Preselect the board(s) you wish to dial and when Flash II is launched either manually from the desktop by you, or automatically by some other program launcher, Flash II will wake up and dial the board(s) you've got selected. It will also wait for the proper time to dial these boards.

* Includes full featured GEM text editor with: merge, block commands, cut & paste, search & replace, paragraph reformating; user tab settings, page width, full keyboard cursor and delete control and more!

* Supports the ST, IBM and DEC character sets, including IBM/ANSI graphics characters!

* Includes Silent Line for background file transfers!

* Supports the following upload/download protocols: ASCII, Xmodem, Ymodem, Ymodem-G, Zmodem, Modem7, WXmodem, CIS B, Kermit and SEAlink! And all of these protocols are built into the program...no external modules required!!!

* Zmodem supports the selection of AutoStart and Streaming options. If you prefer to use an external Zmodem protocol with Flash II, you can now force Flash II's Zmodem autostart mode to off. For BBS' that don't support "streaming", this too can now be turned off.

* Logs all on line time and calculates your approximate costs for you!

* New version written in assembler! Fast!

* Runs on all ST, STe, TT030 and Falcon computers!

* Supports "Install Application". You can create a DO script that can be used to launch Flash II from the desktop and force it to dial up and go online for you, all automatically!

* Both the Terminal and Editor have been enhanced significantly for both speed and ease of use. You'll be amazed at how fast the new Flash II is!

Missionware Software's upgrade policy remains the same for the new Version 2.21! We will continue to upgrade any old version of Flash! (copyright Antic Software) for just $30 US, plus $4 shipping and handling (US and Canada), $8 worldwide. Or, you can purchase Flash II, version 2.21 outright, for only $49.95 US plus the shipping and handling charges applicable to your area.

To order, or for more information, please contact;

Missionware Software

> From the Editor's Controller - Playin' it like it is!

As mentioned earlier, Sega's settlement with Atari is a bonus for Atari's holiday Jaguar campaign. $90 million can provide a big boost for the Jaguar. Will the games be ready in time? This topic is wide open for speculation, unfortunately. Actually, due to the lack of solid news about upcoming games, speculation has been rampant. 30-50 games is still the figure being touted by Atari with regard to the number of games to be available by Christmas. With only Alien vs. Predator currently in production, this means only one game to be released this month. That gives one the impression that the majority of games will need to enter production within the next couple of weeks to make it out by mid-November. A number of games have been mentioned as real close to going to production, so the estimate is not as far-fetched as some would claim. However, I think it's going to be a tight schedule to meet!

Atari's major announcement rumors apparently were more hyped by the users than was necessary - another clear sign that the users are growing impatient again. The announcement, essentially, was the press release dealing with the fact that AvP had entered production and it was getting glowing reports - well deserved, I might add. Another announcement is rumored to be under way for next week, so we'll wait to see what that is all about.

So, let's see what's on tap for this week's Jaguar news!!

Until next time...

ALIEN VS. PREDATOR COMES ALIVE ON 64-BIT ATARI JAGUAR
Video Game Magazine Reviewers Raving about Jaguar's
"Best Game to Date"

SUNNYVALE, Calif. (October 3, 1994) -- Move over Mortal Kombat II, on October 21 the most sought-after video game will arrive in stores across the country. The advanced first-person perspective version of Alien Vs. Predator, available only on the award-winning 64-bit Jaguar system by Atari, is already being considered one of the best game titles in video game history by people "in the know" -- the

video game reviewers.

"Alien Vs. Predator is the best 3-D action game that I have ever played -- the graphics and game play are second to none," claimed Editor-in-Chief Dave Halverson of Die Hard Game Fan, "If you own a Jaguar, you must own this game, and if you don't own a Jag, well, it's time to get one. More games are on the way!"

Roaring into stores on October 21 at a suggested retail price of $69.99, Alien Vs. Predator for the 64-bit Jaguar blows away prior versions of the game with the most realistic graphics available, amazing digitized sound effects and increased play variety. Alien Vs. Predator is a Twentieth Century Fox licensed property based on the films of the same names. Gamers can choose the Predator, Alien or the Colonial Marine as they battle through different theaters of combat including the Predator Ship, the Marine Training Base and the Alien Ship, enjoying hours of different types of play.

"I was overwhelmed by the cutting-edge graphics and the innovative game play of Alien Vs. Predator -- no question, it's the best Jaguar game to date" said Paul Anderson of Game Informer. "The sheer size of Alien Vs. Predator is amazing -- I've already spent 40-plus hours playing as the Marine and haven't even tried the Alien or Predator assignments. Alien Vs. Predator will keep the attention of even the most seasoned game players."

"The sophisticated technology of the Jaguar platform allows for the best in stop-motion animation, giving each character smooth, realistic movements, and digitized sound effects that provide a dynamic audio environment." said software developer Purple Hampton. "Alien Vs. Predator is the best demonstration to date of what 64-bit technology can provide in terms of sophisticated graphics, sound quality and game play."

Atari's Jaguar game system has approximately 30 software titles planned for release before the holiday season. Popular titles in the works include Dragon - The Bruce Lee Story, Doom, Rayman, Troy Aikman Football, and Kasumi Ninja.

"We believe that Alien Vs. Predator has true mega-hit potential," said Atari Corporation President Sam Tramiel. "This is a great example of Atari developing new games that use the full technological capacity of the 64-bit Jaguar and taking home video games above and beyond where they've been to date."

In support of this landmark game and the Jaguar system, Atari has launched an aggressive, multi-million dollar advertising campaign that includes a specific television ad for Alien Vs. Predator. The advertising schedule includes national cable advertising in addition to programming in 19 of the top spot markets that will deliver more than 300 million targeted media impressions.

Since its release in November 1993, Atari's Jaguar game system has been named the industry's "Best New Game System" (Video Games Magazine), "Best New Hardware System" (Game Informer) and "1993 Technical Achievement of the Year" (DieHard Game Fan). The Jaguar is the only video game system manufactured in the United States.

Atari Corporation markets interactive multimedia entertainment systems, including Jaguar, the world's only 64-bit system, and the only

video game system manufactured in the United States. Atari is headquartered at 1196 Borregas Avenue, Sunnyvale, California, 94089.

Jaguar is a trademark of Atari Corporation. Atari is a registered trademark of Atari Corporation. Other products named may be trademarks or registered trademarks of their owning companies.

ALIENtm and PREDATORtm are trademarks of Twentieth Century Fox Film Corporation and used under sublicense from Activision.

-/- Jaguar Game Beta Testers Sought! -/-

SPECIAL OFFER TO JAGUAR OWNERS

In an effort to help developers release quality games for the Jaguar in a timely manner, Black Cat Design (BCD) is looking for a few good play testers.

This is your chance to make a difference, to provide feedback to developers and help mold the future of your favorite video game machine.

BCD play testers will receive EPROM versions of games in various stages of completion during the test period. They will be required to play the games actively and to provide written reports rating the games and levels along with suggested improvements.

At the end of the test period, testers will be required to return all development cartridges and the final "bug free" version will be sent to them free of charge.

If this sounds like something that you would like to volunteer for, please provide the following information and send your application electronically to Tom Harker at ICDINC (GEnie) or 76004,1600 (CompuServe).

-/- Atari Jaguar Demo Tape Available! -/-

CATnips.... Jaguar notes from Don Thomas.

Atari Corporation has released limited quantities of Jaguar software demo video tapes to qualified Jaguar resellers. The tape includes exceptionally clear high resolution Jaguar images and sounds from upcoming games and is modeled after the many great suggestions made by the online community. It is intended to offer retailers a fast way to educate their employees AND demonstrate upcoming software to their customers. The tape is produced by Greg LaBrec using state-of-the-art capture techniques and equipment.

While the Atari Explorer Online video tape does a great job offering two hours of interviews, S-Video captures and a lot more from the recent CES show in Chicago... this tape offers a faster and more efficient glimpse of some of those same titles.

This tape is currently available to qualified resellers ONLY. Resellers should contact their Atari representative OR their distributor for information. Information regarding the AEO CES tape is available from any AEO online representative.

As a reminder... if you missed the latest press release, AEO, STReport, GMJ about the Jaguar... call CATscan BBS at 209/239-1552.

-- Don Thomas
Atari Corporation

[Editor’s note:] I’ve recently viewed this 30+ minute video and it’s terrific! Not only does it contain clips of all of the current games available, but ones slated to appear soon. Among them is a 7-minute group of clips from the upcoming Alien vs. Predator, which looks like a real winner! You get to see segments of the game from all three

perspectives: Alien, Marine, and Predator. The graphics were really nice. Other (new) game clips included Checkered Flag, Zool 2, DOOM, Iron Soldier, Bubsy, Club Drive, and Kasumi Ninja. You also get to see the Tempest 2000, Alien vs. Predator, and the two "Teacher" ads - all excellent ads, by the way!

I was really impressed with AvP, DOOM, and Iron Soldier. All three of these games appear to have the potential of being major sellers. They looked like they are going to be a lot of fun to play! Zool 2 and Bubsy are platform games that may be interesting if you’re a fan of that type of game. I’m not sure if they’ll interest me personally, but the game segments shown looked like fun. Kasumi Ninja didn’t look very smooth with regard to game-play, but it has potential. The graphics were nice; and it’s not just a "punch, kick, and jumping" game. The blood in this game is gratuitous - sometimes seeming a little too much where it doesn’t seem "applicable".

The games that looked disappointing to me were Club Drive and Checkered Flag. The graphics just didn’t have a terrific appeal to me. Checkered Flag looked better of the two. Game play for Checkered Flag also appeared to be better. I’ll have to see more of these two games before I pass them up completely.

If you have an opportunity to see this latest video from Atari, I’d recommend it

---

> Jaguar Online STR InfoFile Online Users Growl & Purr!

[CORRECTION:] In last week’s issue, we included a post pertaining to news of the IRC conference with Zach Meston. In my haste to get that item in last week’s issue, I neglected to attribute the sources for that information. The original post was relayed to Compuserve’s ATARIGAMING Forums, from GEnie. AEO Editor Travis Guy was the original source and the post was brought to CIS by AEO "newcomer", Dimitri Labarge. By the way, in case you didn’t already know, Dimitri, that "Usenet net surfer" seen daily on CIS, is now the new Jaguar editor for AEO. I apologize for any misconceptions derived at for that unidentified item last week.

[Editor’s note:] There was a humorous exchange of messages during discussion of the Jaguar voice modem a couple of weeks ago, on Compuserve. A few of us were discussing what may be needed in addition to the modem. The initial responses were that nothing else was needed, but things got out of hand and the jokes started pouring in. Atari’s Don Thomas put most of the finishing touches on some of our "concerns" with the following response (this is all done in jest!!):

>>Oh sure, now there are stipulations involved!!! Do we have to have
>>a certain color of Princess phone, too? <<RBG>>

I think I intended to mean they need a phone line... not necessarily a telephone.

Okay. I admit I held back some disclaimers... let’s see...

Requirements for voice/modem Jaguar implementation:

* Both players must be have a working Jaguar.
* Both players must have their working Jaguars plugged in.
* Both players must have a color TV or Composite/S-Video monitor.
* Both players must have a joypad.
* Both players must have an RF-antenna switchbox.
* Both players must have an Atari Voice/Modem.
* Both players must have the proper cords for all connections.
* Both players must have a Voice/Modem compatible Jaguar game.
* Both players must have access to a modular phone jack.
* Both players must have active telephone service to the jack mentioned above.
* Both players must be alive, be able to see, breathe, handle a joypad
* Both players must be able to read numeric characters.
* Both players must have parental permission if minors.
* Both players must have ample air to breathe. Food & Water suggested.
* Both players must be able to figure out anything else they may need that I missed.

I think that covers it.

-- Don Thomas
Atari Corporation

And you think that people haven't heard about the Jaguar? From CIS's Ron Luks comes this delightful tale:

A few weeks ago, Don Thomas related a story about how his son expressed pride in the fact that his dad worked for Atari Corp now that they have the Jaguar, so I thought I'd pass along my own recent experience.

While visiting friends and family in NY last week, I told my nephew and niece that I just got "the most powerful video game system on the market..." and before I could finish the sentence, they both shrieked "Oh-my-god, Uncle Ron... You got the JAGUAR???!!!???!!!"

Then a stream of non-stop "oh wow! how cool!.." and other 8 and 11 year old comments followed. Uncle Ron became a hero and it was a very heartwarming experience.

What's the bottom line here? It proves to me, beyond any shadow of a doubt, that the Atari name is still on everyones lips and the Jaguar is *the* *hot* video game system.

I wonder if they'd still respect me if they knew I couldn't get past level one on Wolf 3-D? [g]

Ron

From Atari Europe comes a quick compilation of news quotes regarding Alien vs. Predator:

Alien vs Predator Press Quotes

"The best action game ever issued on console.....For the first time a console game recreates the tension and atmosphere of a movie" MEGA

HIT 95% Console + Magazine (France)

"The finished result is stunning, the combination of the fluidity of movement, eery sound samples and stunning visuals make AvP a completely engrossing experience" 5/5 Movies, Games & Videos Magazine. (UK)

"This is one compelling and addictive in your face title. You'd have to be Rhino-scrubbingly mad not to enjoy this game" 95% Gamesmaster magazine. (UK)

"Alien vs Predator is the best 3-D action game that I have ever played - the graphics and gameplay are second to none". Die Hard Game Fan magazine. (USA)

"I was overwhelmed by the cutting edge graphics and the innovative gameplay" Game Informer Magazine. (USA)

"Fantastic graphics that recreate the feel of the Aliens movie help make this one of the most addictive games ever" Sunday Mirror (UK)

4/10 Edge Magazine

Is somebody here outta line with the rest of the industry?

PEOPLE... ARE TALKING

On CompuServe

compiled by
Joe Mirando
73637,2262

Hidi ho friends and neighbors. First off, I'd like to thank those who took the time to ask about how my back is coming along. It's coming along slowly but surely and I expect to be back to normal before too much longer. Of course, the doctor isn't quite so sure, but that only reinforces my opinion of doctors.

Well, enough about me. Let's get on with the whole reason for this column: All the cool news, hints, and tips available every week right here on CompuServe. C'mon along for the ride...

From the Atari Computing Forum

Mark Hadfield asks:

"How do I achieve a V32 BIS connection? I'm somewhat ignorant when it comes to modems. I have a Pace Microlin fx32+. I know it is V32bis 'cos it says so on the case and I know that it uses an AT command set. What I don't knw is this: will the modem automatically use V32bis when talking to CompuServe (presumably because the other end is V32 bis) or do I need to set it up correctly, e.g. initialise the modem to V32 bis using AT commands?"

Sysop Jim Ness tells Mark:

"Almost all modems come set up to automatically use v32bis, whenever the other side permits it. So, you should be able to simply call the local CIS 14400 node in your area, and get a v32bis connection. GO PHONES will give you that phone number."

Oolah Boudreau asks for help in selecting an online navigator:

"Can you recommend a navigator for me to use? Is there anything I can get here in Compuserve? I have a four meg older 1040 w/color and mono monitors, and a 83meg HD. Also the ICD AdSpeed ST. What can I use?

Oh, and is there anything in the library to unpack binary files? What would I ask for in the file finder?"

Sysop Bob Retelle tells Oolah:

"Yes, Oolah.. we have an offline message reader/navigator for the Atari ST here in our software libraries. It's called QuickCIS and the author, Jim Ness, is a Sysop here too, in case you have any questions about it...

As for utilities for uncompressing binary files, the one to get is here in Library #4, and it's called ARCLZH.TOS (hmm.. or maybe ARCLZH.PRG, in case that one doesn't work).

When you download it, put it in a folder of its own, then double click on it to run it... the file will uncompress itself into several files. Two of them are the actual uncompression programs, and one is a ShareWare "shell" program to make the other to easier to use. Be sure to read all the instructions about how to set them up.

The two utilities in this package are ARC and LZH which will take care of a lot of the compressed files we have in the libraries. There are also a good number that use the ZIP compression method, and we have a separate uncompression utility for that one too. It's also in Library 4 and is called STZIP.

Let us know if you have any questions about using these programs..."

Yat Siu tells us:

"I've been dabbling with Atariworks again and I discovered something peculiar and wondered if anyone knew what it was about. I saved off an atariworks file (*.stw) and then when I loaded it again and wanted to print it output the file without the graphics. Instead it had huge large boxes with a cross. However when I first printed it out it worked just fine. How does atariworks save off it's graphic files and why are they lost? Or better yet, what am I doing wrong *grin* :) ?

Anyways, if anyone knows how I can reprint that file from atariworks

with graphics I'd appreciate it."

Mike Mortilla tells Yat:

"Unless I'm mstaken, AW doesn't actually save the graphics with the file, but rather "points" to a location where the file can be found. If it's not where it expects it will, at best, print a box. At worst, it will crash.

Someone correct me if I'm wrong about that."

Carl Barron adds:

"If the graphic is an IMG, AW stores the complete path name where it was stored. If you have the graphic you can delete the box and add the graphic back in. If you know the original path, you can put the graphic there and print. I believe GEM METAFILES are stored within the AW file and no path problem occurs. If it was a bitmap IMG, you no longer have, it is gone.... IMG import was added as an 'after thought' by would be user requests."

Michael "Papa" Herbert tells Yat:

"Yep, AW saves the path to the .IMG rather than the .IMG itself - just like Ventura Publisher and, BTW, Papyrus. GEM's are stored within the STW file.

Before saving an .STW that incorporates graphics I like to 'Hide Picture' making certain to include the full pathname in the dialog box. Saves me some grief later on for sure!"

Brian Gockley adds his knowledge to the pool:

"AtariWorks doesn't save the image file, just the path. You probably moved the IMG or moved the file or something. That is my guess."

And speaking of Brian, after he posts that a couple if programs didn't work while SpeedoGDOS was loaded, Robert at Compo Software replies:

"You say 'a couple' programs don't work with SpeedoGDOS loaded. You then go on to describe a problem with Atari Works. Well, that's one. Any others?

(I'm making a point here... you've gone from lots of problems... to a couple programs, to one specific problem). Now here's what gets me, and this has nothing to do with whom I work for, or SpeedoGDOS. You found a problem between SpeedoGDOS 5 and Works - yet you blame SpeedoGDOS. Is it possible that it could be Works? There's this phenomenon where folks blame the most recently added component, where it could be any number of things! I get calls all thee time... " I found a bug in SpeedoGDOS and you guys are jerks..." most of the time (honestly) it's a problem in another program. In fact, you'd be surprised at how many bugs we've found in Works.

Anyway, let's get down to your report. There is a problem using Text Attributes in Works, and this occurs with SpeedoGDOS 4.2 and 5.0. Atari changed the way attributes worked in version 4.2, and we inherited it. Sometimes it works, sometimes it doesn't. Some folks have no problems, some folks have a few problems, some folks have lots of problems. For example, you said that only the Outline attribute caused problems. I've

heard from other users that have problems using Bold attribute. Pretty strange. Anyway, in this case, it’s both programs. SpeedoGDOS has problems with attributes, and Works has problems with attributes. As for SpeedoGDOS, we’re in the process of completely rewriting the attribute stuff. A forthcoming update, 5.0c, will have lots of it stabilized, and faster, too. The next version after that should be flawless. As for Works, it’ll still have problems, so we’re building in workarounds specifically for the way Works does things.

Generally, you can use Text Attributes with SpeedoGDOS 5.0b without problems. If you do have encounter problems, SpeedoGDOS 5.0c will probably fix it. In either case, you’ll likely not have problems with attributes except with Works. We didn’t create this situation, but we’re dealing with it.

Thanks for the report, and if you find anything else, I’d love to hear it. We are spending more time creating work arounds for other programs that fixing SpeedoGDOS itself (oops, I mean, ’Than’ not ’that’). Someone’s got to do it, ya know?

So thanks again, and if your buddy registered his SpeedoGDOS, he or she will be getting a notice on the new version. Take care."

Brian tells Robert:

"Thanks for your reply, you’re right, I was blaming SpeedoGDOS 5, and I should have realized that Works was equally involved. I have several GDOS programs, and have not put all of them through the same test that I put Works through. I guess that since things seemed to be working with 4.xx, the change to 5.xx made 5.xx the first culprit. I’m glad I was partially wrong, and that you guys are working on an update. I assumed you would be doing that anyway, but I’m glad to hear that you’re working specifically with AtariWorks. I’ll send any other program problems along ASAP.

On another note, as a PageStream user, I have all my Type 1 fonts seperated into individual folders. Since some of the fonts are named ADM or 321, it is nice to have those files in a folder called AVITAL or BOOKMAN. Anyway, it looks like Speedo5 wants me to move all these fonts into one folder - making a hodgepodge of my nice neat arrangement. Is there anyway that Speedo5.c could look in more than one or two folders; how aout 100 folders, 1,000, 1,000,000! Anyway, that would be great.

Finally, do you know of any Atari program that would let me change a Type1 font into a GEM object? I’d love to extrude, warp, twist, color, shadow an otherwise play with the font. Something like FontTricks on the PC."

Michael "Papa" Herbert tells Brian:

"I convert Type 1 fonts to Calamus CFN’s, import them into a template I created in Outline Art, save them as CVG then bring them into Avant Vector where I save them as GEM3 (complete with Beziers). After bringing them into MyDraw and saving again I have a set of editable GEM vector objects that can be used in _almost_ any GEM editor.

You can’t type in your text - you have to build it a letter at a time and hand-kern it. You can play around with the control points, change fills and do other neat things with it though - it’s just a bunch of vector objects.

This is another of my projects - I call it "Papa's Fun Fonts" and plan to put out a set of about 50 typefaces and an accompanying book with either MyDraw or Kandinsky included. Definitely not a full blown 'type-styler' but it will do until we get the real thing!"

Robert at Compo tells Brian:

"Actually, SpeedoGDOS 5 lets you use as many font folders as you like. It's well documented in the manual, but the Outline Fonts program lets you use up to three font folders, and you can manually add more (the limit within Outline Fonts is there to keep the program easy to use, while still tracking which folders have which fonts).

As for converting a Type 1 font into a GEM object, any drawing program can do it, as long as it supports Speedo. Kandinsky (a German, but translated to English, shareware program) seems pretty popular these days, and it'll support SpeedoGDOS so you can load any Speedo/TrueType/Type 1 font, manipulate it however you like, and save the whole thing out as a metafile for importing into whatever program you like. There are other programs besides Kandinsky that support SpeedoGDOS and metafiles; most commercial drawing programs do."

From the Palmtop Forum

William Taylor asks for help with his Atari Portfolio:

"My Portfolio is a cute little gadget. But it was sold to me as (and I bought it with the dream of) a mini-computerized PIM that could interface seamlessly with my PC.

Well, it does interface but far from seamlessly. Month after month I plod through endless magazine pages searching for a PIM that would tie my PC and my Portfolio together.

So far, my quest has been a dismal failure... unless you can help. Can you??"

Bill Osburn tells William to...

"Get a PC Card Drive. It can also allow painless data transfer to and from a PC. Then you can get a program for the PC that looks and acts identically to the built-in programs on the PORT. Have fun!!!"

Dan Shearer tells William:

"Sorry to hear of your bad luck. I saw someone recommending a card drive. This is a good move. If you don't want to spend the money for this, I would recommend serial communications to transfer the data across. An Atari serial adapter or one of our Universal interfaces would do the trick.

The port works well with most applications, but the version of DOS, 2.11, is really limited. Other than that, the Port was way ahead of its time."

William tells Dan:

"Thanks for the tip, Dan. Perhaps I didn’t express myself very clearly. What I am after is a program (like Card File for Windows, or Appointment Calendar for Windows for instance). But one that would work on both my Portfolio and PC and allow me to transfer data between them. However, from the sound of you previous reply I don’t think that program exists."

Peter Bennett tells William:

"I noticed your message to Dan - have you checked out PortCard and PortCal which should be in the libraries. These are Cardfile and Diary programs for Windows which are also compatible with the Port’s built-in apps. The cardfile program will write to both Windows cardfile and Portfolio .adr formats.

The other program to check out is Don Thomas’ excellent Adr_Book, aPC program which reads, writes and otherwise manipulates Portfolio .adr files on the PC.

Finally there is PC Applications, the commercial software from DIP, which emulates all the Portfolio built-in Apps on the PC (if you are interested, I have a copy for sale...)"

From the Palmtop B Forum

Alexander Trunov asks about a text reader for the Casio/Tandy Zoomer:

"I was just wondering if you know of an "electronic book reader" made specifically for the Zoomer, similar to what’s out there for the Newton?"

Sysop Lloyd Wasser tells Alexander:

"You can purchase the Palm Utilities package from Palm Computing, which allows you to turn ordinary text files into Notebook documents, where they can be read page-by-page.

Or, Kerry’s Textreader 2.0 is available as shareware. Check the forum libraries; there should be a text file on it in there (I know there is a TextReader 1.01 shareware app you can download)."

Sysop Marty Mankins tells us a bit about the difference between SRAM and FlashRAM:

"The difference between SRAM and Flash is that SRAM is powered by a battery to keep data alive, whereas the Flash card doesn’t need power to keep the data.

But, there needs to be a larger power surge to write data to a Flash card. Plus the Flash card can only be written to so many times. Not to worry, though. The life span of a heavily used Flash card can go 5-6 years, so it’s not something to worry about. I’d say you’d outgrow a 2Mb Flash card before it would even come close to wearing out.

SRAM cards will work in most PDAs and palmtops."

Sysop Lloyd Wasser adds:

"Sram is more expensive per meg right now. Flash is cheaper. Sundisk is the major pcmcia flash vendor for PDA devices such as the Zoomer. Their prices just dropped dramatically...

New software will soon appear for the Zoomer, and Pen Computing Magazine has reported that a "faster ROm chip replacement" for the Zoomer will soon be offered to Zoomer owners, I assume as an upgrade to the existing ROM.

Check out the Graffiti tutorial in our Library here -- it is a SUPERB add-on for the Zoomer. The full-blown version offers a terrific HWX enhancement to your Zoomer. Other firms are also developing Geos/Zoomer technology.

More on that later....when it’s not just vapourware and rumor."

Sysop Ron Luks adds:

"FLASH memory is non-volatile (requires no battery power to retain data) while SRAM requires a power source, usually a button-battery that needs to be changed once a year.

SRAM is faster, but most users dont notice a difference in speed in regular use.

SRAM used to be cheaper, but lately FLASH ram is less costly and this trend looks like it will accelerate (FLASH will be *much* cheaper).

SRAM cards are widely compatible across many platformsbut FLASH ram requires specific drivers for each computer. i.e.-- I have an SRAM card that works in all 5 of my palmtops but my FLASH cards are more machine dependent.

SRAM mimics your hard disk or floppy disk format and maintenance operations (file delete, rename, copy, etc) very closely but FLASH RAM doesnt. FLASH RAM uses a "block" system for storing, reading/writing files that is different than the usual DOS FAT format. In some FLASH cards, deleting a file does NOT regain the storage space. You have to run a utility program to compact the disk and regain the storage area. Most new FLASH drivers make this an ’invisible’ operation so to the end user, FLASH ram tends to act just like SRAM.

More development is being done on FLASH ram and it appears that FLASH will continue to be cheaper, become more universally compatible, have higher storage capacities and will ultimately prevail over SRAM but at the present time there are some definite advantages to SRAM."

Well folks, that’s it for this week. Tune in again next time and be ready to listen to what they are saying when...
